

450nm, 100mw, TO38 package

Application :

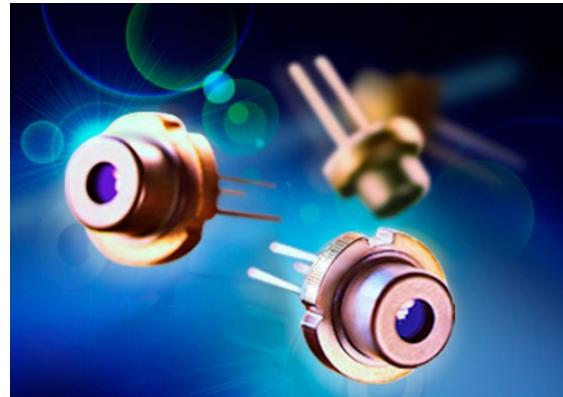

Industrial use / Biomedical / Projection

Property :

Wavelength Range = 450nm

Introduction :

Typical emission wavelength at 450nm and it is a efficient radiation source for cw and pulsed operation.

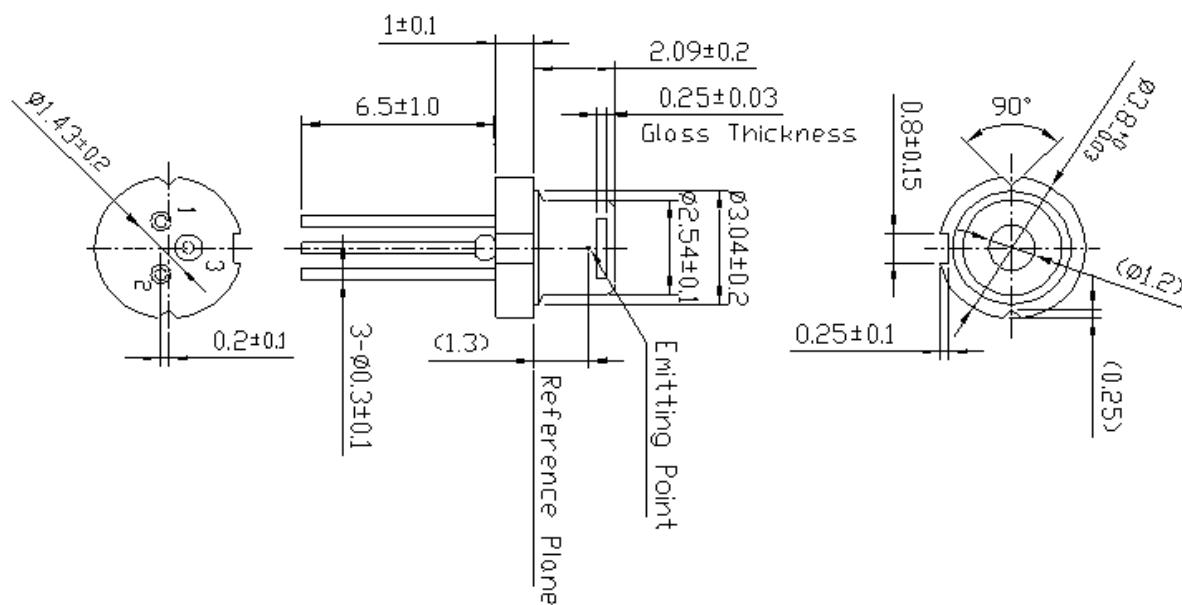

Laser Characteristics (T=25°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Condition
Emission Wavelength	λ_p	440	450	460	nm	$P_o=100mW$
Optical Output power	P_o	-	-	100	mW	-
Threshold Current	I_{th}	-	-	50	mA	-
Operating Current	I_{op}	-	-	140	mA	$P_o=100mW$
Operating Voltage	V_{op}	-	-	6	V	$P_o=100mW$
Beam Divergence	$\Theta_{//}$	6.5	8.5	10.5	deg	$P_o=100mW$
	Θ_{\perp}	20	23	25	deg	$P_o=100mW$
Beam Deviation Angle	$\Delta\Theta_{//}$	-2.5	-	2.5	deg	$P_o=100mW$
	$\Delta\Theta_{\perp}$	-3	-	3	deg	$P_o=100mW$

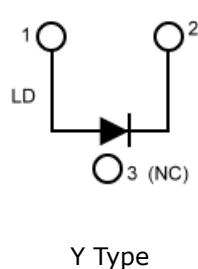

Maximum Rating

Parameter	Symbol	Value	Unit
Operating Temperature	T_o	-10~+80	°C
Storage Temperature	T_s	-40~+85	°C

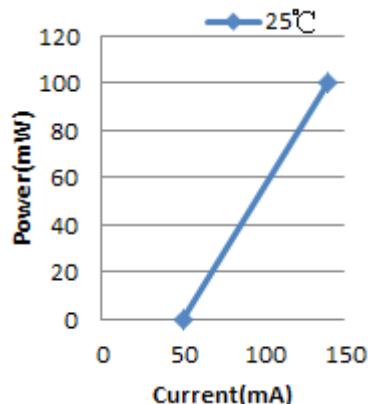

Package Outlines :

Package Connection :

Optical Output Power vs Forward Current :

Caution :

- The forward voltage to drive the optical output power of an LD fluctuates with temperature. High temperature compromises optical efficiency of an LD and thus results in even more operating current to support constant output optical power.
- The reliability of LDs is influenced by Static electricity or electrical surges. Wrist strap or anti-electrostatic glove are recommended to use when picking up LDs.

Certification :
